

RECIPE 420[®]

BHANG[®]
POTTING SOIL

WELCOME TO THE RECIPE 420 COMMUNITY

All Recipe 420 products are carefully crafted—combining years of growing experience, long-time connections with progressive suppliers of superior quality ingredients. We select and blend ingredients to deliver maximum growth benefits. For over 100 years, we've been helping growers just like you get the most out of their soil, their crops, and their time.

RECIPE 420 BHANG POTTING SOIL

Get a fast start and an easy win with Recipe 420 BHANG Potting Soil—designed especially for home growing indoors or out. This leading-edge blend will transform your growing experience and provide a root zone that ignites growth at every stage. Your plants will find super aeration from coconut coir and volcanic pumice. At the same time, the ideal water-holding and nutrient-holding materials give you the inside track for all-season success. Get ahead of the pack and cross the finish line first with Recipe 420 BHANG Potting Soil.

LET'S GET GROWING — INDOORS & OUTSIDE

Recipe 420 BHANG Potting Soil is ready to use right out of the bag in any size pot from starter pots to larger containers, and even high-volume grow bags. Be sure your container has drain holes for optimum drainage.

Fill your container with Recipe 420 BHANG Potting Soil, allowing enough room at the top for watering. Gently place the plant into the soil mix, add more soil as needed around the plant, and water thoroughly.

Recipe 420 BHANG Potting Soil gives plants a good start, but be sure to fertilize throughout the growing season with one of our Recipe 420 Fertilizers.

RECIPE 420 BHANG POTTING SOIL—HIGH PERFORMANCE FUEL FOR PLANT GROWTH

The Recipe 420 team has dialed in a winning mix of potting soil ingredients for the backyard grower. Buckle up and hold on, this mix is super charged for all stages of growth.

Your plants will love this soil blend. This unique soil mix also includes bat guano.

HAND-SELECTED INGREDIENTS FOR THE SPECIFIC NEEDS OF PROFESSIONAL GROWERS

Ingredients: Aged forest products, coir, volcanic pumice, rice hulls, bone meal, feather meal, bat guano, kelp meal, and alfalfa meal.

This product should be used within two years of the date of manufacture to maximize the benefits of the microbiological inoculum.
